

Phase 6 – Project Testing

AI WeatherWise Project

1. Testing Setup

- Ensure MongoDB is running and environment variables are configured.
- Start the backend server using npm start.
- Use Postman or Thunder Client to test REST APIs.

2. Test Cases

ID	Test	Expected Result	Result
TC01	Register valid data	User registered	Record
TC02	Login valid credentials	Token/auth response	Record
TC03	Invalid login	Request rejected safely	Record
TC04	Weather API	Current weather response	Record
TC05	Favorite location CRUD	CRUD works as intended	Record
TC06	AI Recommendation API	AI summary/recommendation	Record
TC07	Protected route without JWT	Access denied	Record
TC08	Invalid/malicious payload	Safely handled/sanitized	Record

3. Testing Evidence

- Add Postman/Thunder Client screenshots for major endpoints.
- Record actual result and Pass/Fail status after execution.
- Document bugs, fixes and retest results.
- Include API testing video evidence if available.
